Gun Butter

Shooters who compete in extreme weather know all too well that many lubricants can attract an undue amount of dust, thicken up in cold weather, or have a viscosity similar to water in hot climates. Gun Butter is designed for consistency in a sport where precision is mandatory. The high-quality oil adheres to metal, retains its integrity even in a pouring rain, will not evaporate, repels dust and ensures a consistent ignition sequence—regardless of conditions. It has four times the film strength of molybdenum grease and helps prevent carbon buildup. Contact Gun Butter, Dept. SSUSA, 15321 Meadow Road, Lynnwood, WA 98037; (425) 742-7331; www.gunbutter.com.
