

A Simple Test: Gun Butter vs. Competitor One

Through word of mouth from returning Veterans from Iraq, we were told the closest thing to simulating desert sand conditions in your weapon is talcum powder. Idea: The thought was to test both products using a product that simulates desert conditions. The test product was Baby Powder.

Step One:

Applied Gun Butter (left) and "XXX" (right) to the blade of a butter knife.

Step Two:

Applied Baby Powder over the top of both products, and allowed to stand for 30 seconds.

Step Three:

After 30 seconds, the baby powder was shaken off of the knife.
